Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A,Description: minor component of wild-type curli, interaction between CsgA and CsgB tr A,Note: curli are thin, coiled fibers expressed on the surface of Escherichia coli that and H-kinindgen; in the absence of CsgA, CsgB can self-assemble into polymers
F;1-21/Domain: signal sequence #status predicted <SIG>F;22-151/Product: minor curlin chain #status predicted <MAT>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            C;Species: Escherichia coli

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Curlin nucleator protein csgB precursor - Escherichia coli (strain K-12)

NyAlternate names: csgB protein; curlin nucleation component; minor curlin protein
C;Species: Escherichia coli
C;Date: 12-Feb-1998 #sequence_revision 20-Feb-1998 #text_change 01-Mar-2002
C;Accesion: $707897, F64846

R;Hammar, M.; Arnqvist, A.; Bian, Z.; Olsen, A.; Normark, S.
Mol. Microbiol. 18, 661-670, 1995

A;Title: Expression of two csg operons is required for production of fibronectin- and Cc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Skelton, J.; Stevens, K.
Salmonella enterica sero
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         aggregative fimbriae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                nucleation component of curlin monomers [imported] - Salmonella enterica subsp. C.Species: Salmonella enterica subsp. enterica serovar Typhi A;Note: this species has also been called Salmonella typhi C;Date: 09-Nov-2001 #sequence_revision 09-Nov-2001 #text_change 18-Nov-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        C,Function:
A,Description: minor component of thin aggregative fimbriae
A,Note: fimbriae bind to fibronectin, plasminogen, tissue plasminogen activator
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    4,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  4,

XT from to for form the foreaction of finger protein required for female germ line development.";

EMBO J. 10.2259-2266(1991)

LINE GELLS. PLAYS A ROLE IN GERM LINE SEX DETERMINATION.

-1. FUNGTION: REQUIRED FOR SURVIVAL AND DIFFERENTIATION OF FEMALE GERM LINE SEX DETERMINATION.

-1. DEVELOPMENTAL STAGE: FIRST APPEARS IN THE GERMARIUM AND ACCUMULATES IN UNTRS CELLS DURING OGGENESIS. STORED IN THE EGG, BUT IS RAPIDLY LOST IN THE EMBRYOS EXCEPT FOR ITS CONTINUED PRESENCE IN THE GERM LINE PRECURSOR POLE CELLS.

-1. SIMILARITY: Contains 4 C2H2-type zinc fingers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This SWISS-PROT entry is copyright. Outer membrane protein B precursor (168 kDa surface-layer protein)
(Surface protein antigen) (Cell surface antigen S) (Gas5) (Tompa)
(Tompa B) (Contains: 120 kDa surface-exposed protein (Surface protein antigen) (120 kDa outer membrane protein ompB); 32 kDa beta peptide].
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -!- FUNCTION: THE 32 kDa BETA PEPTIDE MAY SERVE AS A MEMBRANE ANCHOR (By similarity).
-!- SUBCELLULAR LOCATION: Cell wall. This bacterium is covered by a slayer with hexagonal symmetry.
-!- SIMILARITY: BELONGS TO THE RICKETTSIAE OMPA/OMPB FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Uchiyama T., "Sequencing of the gene encoding the protein rOmp B of Rickettsia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       japonica.";
Submitted (MAY-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: THE 120 kDa SURFACE-EXFOSED PROTEIN IS A MAJOR
STRUCTURAL PROTEIN WHICH MAY PLAY A ROLE AS A RICKETTSIAL
VIRULENCE FACTOR AND/OR IMMUNOGEN DURING INFECTION (By

-!- FUNCTION: Essential component of nuclear pore complex.
-!- FUNCTION: Essential component of nuclear pore complex.
Nucleoporins may be involved in both binding and translocation of the proteins during nucleocytoplasmic transport.
-!- SUBCEDLIULAR LOCATION: Nuclear pore complex.
-!- DOMAIN: Contains G-L-F-G repeats.
-!- DOMAIN: Belongs to the GLFG family of nucleoporins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

Theracts with nedl.
The SUBUNIT: Monomer. Interacts with nedl.
The SUBCELLULAR LOCATION: Nuclear pore complex (By similarity).
The DOWAIN: Contains G-L-FG repeats.
The SIMILARITY: Belongs to the GLFG family of nucleoporins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Voshioka S., Kato K., Nakai K., Okayama H., Nojima H., "Identification of open reading frames in Schizosaccharomyces pombe
                                                                                                                                                         Schizosaccharomyces pombe (Fission yeast).

()

Mol. Biochem. Parasicol. 48:173-184(1991).

-!- FUNCTION: Has an integral role during the infection of macrophages in the mammalian host.

-!- CATALYTIC ACTIVITY: Preference for hydrophobic residues at P1 and P1. and basic residues at P2 and P3'. A model nonapeptide is cleaved at - Ala-Tyr-|-Leu-Lys-Lys-.

-!- COFACTOR: Binds 1 zinc ion per subunit (By similarity).

-!- SUBCELLULAR LOCATION: Attached to the membrane by a GP1-anchor.

-!- SIMILARITY: Belongs to peptidase family M8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              REMOVED IN MATCHE FORM (BY SIMILARITY).
